

KEYSTONE™

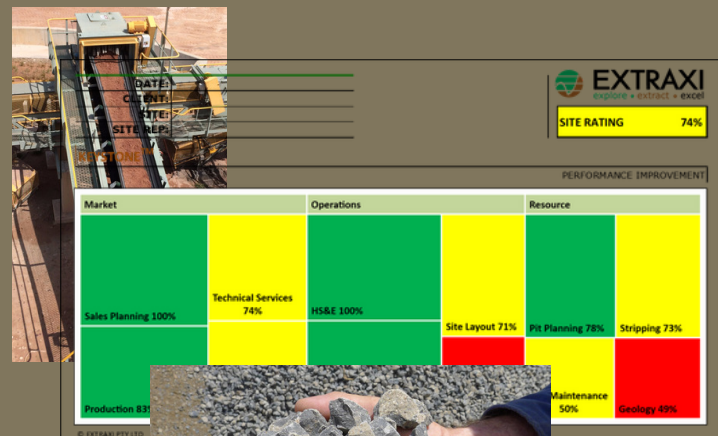

PERFORMANCE IMPROVEMENT

EXTRAXI has pioneered the development of the KEYSTONE Performance Improvement tool for small mines, quarries, and extractive industry operations.

KEYSTONE is a dynamic management review tool that assists work teams and operations to identify areas in their business where improvements can be made. Covering the Key Areas of Market, Operations, and Resources; KEYSTONE undertakes an in-depth review of every part of the business (or just one of the Key Areas if desired), and then cross-references results with Management imperatives, such as Performance, Controls, and Design, producing a matrix of organisational processes ('Keystones') and their impact on the overall business.

Results using KEYSTONE provide work teams with an easy to understand representation of the processes which drive the business. Active colour coding and numeric rating of each 'Keystone' completes the tool, supported by an in-depth assessment of each process.

As a Performance Improvement tool, KEYSTONE provides practical insight for management teams working in the mining, quarrying, and extractive industries; identifying the processes where the greatest improvement potential can be found and effectively cutting through to the issues that matter.

Contact us for further information and how KEYSTONE can assist you to improve your business.
